What do we mean by presentations?

- Presentations are a way to relay or give out information
- Results of a clinical trial are presented:
 - To study teams to show progress, quality and to make decisions
 - to the clinicians, directors
 - to regulators
 - at conferences

Current process for generating presentations

- Presentations are generally created in Powerpoint
- Standard process:

Generating a presentation: Components

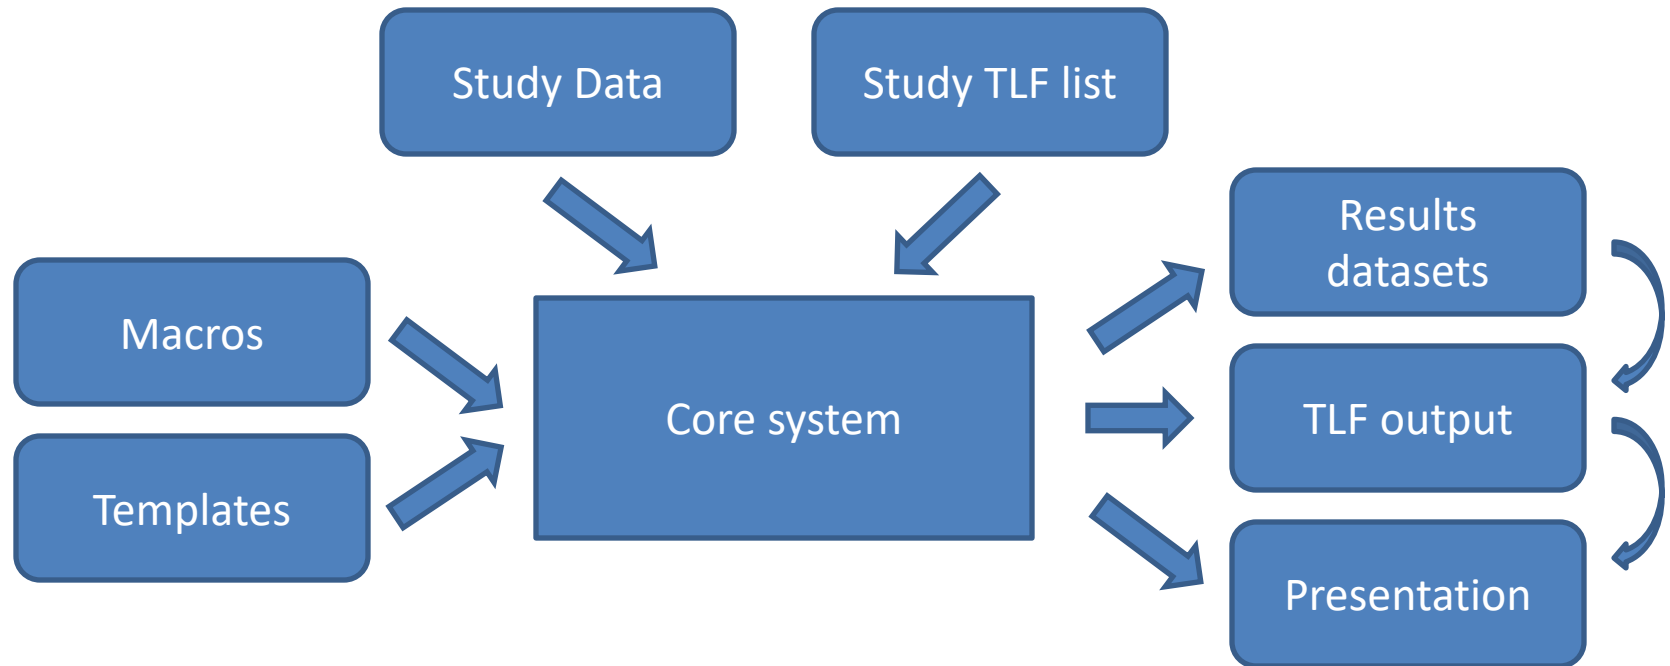

- What do we need to generate a presentation?
 - Requirements (Presenter)
 - Text/graphical details about the topic (Presenter/Expert)
 - Validated summary tables and charts of the trial results (Statistician/Programmer)
 - Compiling and creating the presentation (Presenter/Expert)
 - Review and update presentation (Presenter/Expert/Project)
 - Final presentation

Generating a presentation: Challenges

- Many levels of interaction
- Output from the correct snapshot is used
- Output often required during critical project time-points when resource is scarce
- Requirements change frequently after reviewing outputs
- Output still need to be integrated into the presentation

Generating a presentation: Solution

- Ecosystem is a system built up of individual components that can be added or removed from the core system.

Demonstration
