

Project Programmer Role

Addressing the need for a high-level lead programmer that is responsible for programming activities across an asset/indication within a therapeutic area

Submission complexities have grown
Clinical Programming sophistication
and technical requirements led to
Programming becoming its own standalone
Department at GSK

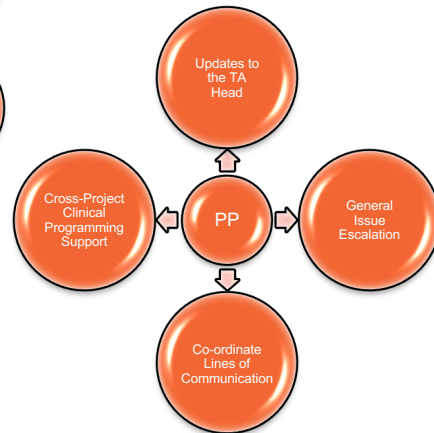

CDISC implementation, Data Strategy, Project /
Submission Influence, & Leveraging of valuable
Clinical Programming expertise led to the
formalizing of a role already performed on many
medicine development projects

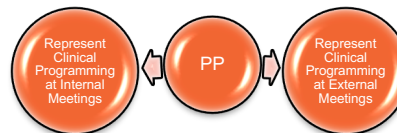

General/Project Management

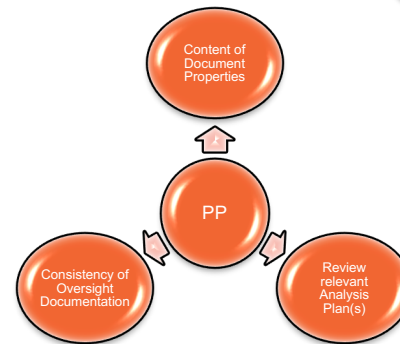

Communication

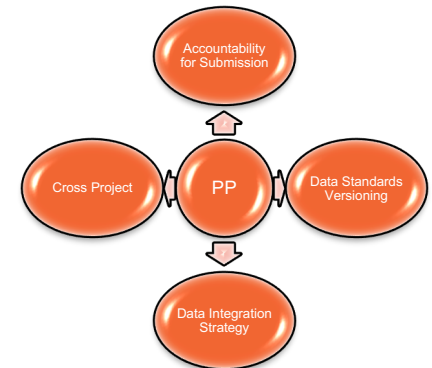

Meetings

Documentation

Data Strategy and Submission

Identify main skills required of a PP
Develop list of Capabilities needed and
Trainings to fill them

Survey across departments to track interest,
awareness, engagement & Impact
Follow up surveys to track/assist in increase of
awareness and impact
