

PP19: Safety Graphics Consortium

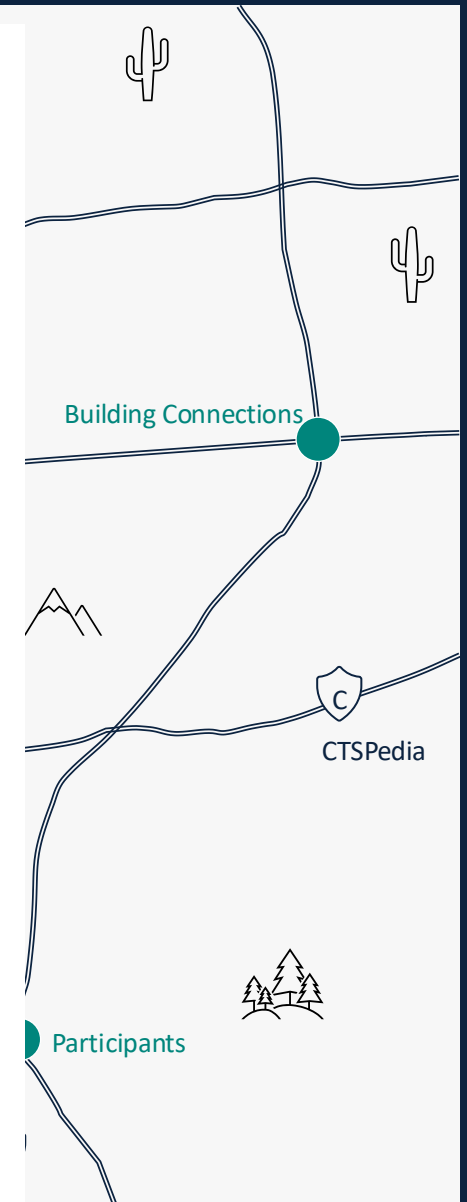

Building a network out of existing working groups and/or subgroups

- That have had some demonstrated success
- Not starting from zero
- Essentially no operating costs
- Would need to achieve critical mass to grow and thrive

The unifying force would be Safety Graphics

- If this works well for Safety Graphics (focused on clinical trials)
- The process could be repeated for other domains (which could overlap)
 - Postmarketing safety surveillance
 - Benefit/risk assessment
 - Real-world evidence...

PP19: Safety Graphics Consortium

Network together

- Build connections
- Strengthen connections
- Avoid duplication

Dynamically and interactively work together

- Rather than just working in parallel
- Working groups would continue to do their own thing
- But align on overlap and connections

We would all do our part

- Share our subject matter expertise
- Point to each other's relevant subject matter expertise
- Like Wikipedia (crowdsourcing)
- Like writing a paper and citing other work
