## Data Visualization: Tale of data through visuals

# Agenda

This paper covers the story of data and emphasizes the importance of visualization techniques.

- 01 Abstract
- 02 The story of 'Data'
- 03 Warm-up
- 04 Why do we need visualization techniques?
- 05 Some graphs (Waterfall Chart, bar chart, scattered plot)
- 06 Conference Success - Illustration
- 07 Interactive Chart
- 08 References

# Abstract | Data visualization – a tale of data through visuals

Every year more than 200K trials are initiated. Clinical trial data is increasing exponentially. Well, when one says exponentially it means, if the data was plotted, it would reveal a certain pattern.

**Data Visualization** or **Infographics** is a technique of interpreting the data with the help of information from the graphs. It helps to check data models, outliers and spread of the data. This enables us to determine the statistical techniques which could be used for analysis. Advanced tools, like **R**, **Python** and **Tableau**, enable users to view the data in various ways, dissect it by several parameters in consideration, with just a click. Visuals such as automated graphs and interactive dashboards empower users to monitor and aggregate patient data from the constantly changing enormous data and understand the “**Big picture**”.

This paper will focus on how data readability varies with change in visual representation and how it aids in inference. Let us explore the power of visuals.

# The story of 'Data'

# Warm up quiz

Identify the distribution in the graphs below.

Poisson

Logistic regression

Normal

Graph helped us to identify the distribution of the data.

# Why do we need visualization techniques?

Transform row data into summary leading to centralized tendency of data

Cumulative impact

Support scientific claim

Derive more value from large amounts of data

Identify relationships, patterns or emerging trends and outliers too

Simplify to infer leading to Optimized decision making

Bigger picture when multiple datapoints are presented together **OR** Bigger picture when the same datapoints are presented for long time-periods

Better Presentation

**A Picture Is Worth a Thousand Words**

# Waterfall plot

## Code

```
1 #set library for plot
2 library(ggplot2)
3 library(dplyr)
4 library(gapminder)
5
6 #Convert Male into facotr variable
7 heart_2$male <- as.factor(heart_2$male)
8
9 #Order response variable in descending order
10 o <- order(heart_2$sysbp12,decreasing=TRUE,na.last=NA)
11 heart_2 <- heart_2[o,]
12 col <- ifelse(heart_2$male == 0, "#BC5A42", "#009296")
13
14 barplot(heart_2$sysbp12, border=col, space=0.5, ylim=c(-50,30),
15         main = "waterfall plot for change in systolic BP", ylab="Change from baseline in systolic BP",
16         cex.axis=1.2, cex.lab=1.4, legend.text=c(0,1),
17         args.legend=list(title="Treatment arm", fill=col, border=NA, cex=0.9))
```

## Sample Data

| male | age | diabetes | totChol | sysbp11 | sysbp12 | diaBP | BMI   | heartRate | glucose | TenYearCHD | ctr        | yr_cat |
|------|-----|----------|---------|---------|---------|-------|-------|-----------|---------|------------|------------|--------|
| 1    | 39  | 0        | 195     | 106     | 14      | 70    | 26.97 | 80        | 77      | 0          | China      | 1990   |
| 0    | 46  | 0        | 250     | 121     | 15      | 81    | 28.73 | 95        | 76      | 0          | Thailand   | 1990   |
| 1    | 48  | 0        | 245     | 127.5   | -7.5    | 80    | 25.34 | 75        | 70      | 0          | Japan      | 1990   |
| 0    | 61  | 0        | 225     | 150     | -20     | 95    | 28.58 | 65        | 103     | 1          | South Cor  | 1990   |

## Output

# Was the conference successful?

## What did the conference consist of?

People connects and knowledge sharing sessions. Let us visualize the people connect.

### Conference Execution

The conference was hosted by the internal data mining group.

### Gauging Efficacy

The conference's efficacy was gauged by asking the participants to provide the email addresses of the connections they made. This was then presented using a link diagram in Power BI.

Here is a look at how these connections were forged -

# Dashboard

# Interactive graph

Check out the interactive graph in this workbook.  
Select different studies, and you will notice that the  
categories change accordingly.

*Similar charts can be configured in Power BI*
