

An Introduction to the Safety Analytics Subcluster on the PHUSE Education Website

Authored by the Safety Analytics Education Subteam:

Presenters: Mary Nilsson (Lilly; nilsson_mary_e@lilly.com) and William Palo (AbbVie; william.palo@abbvie.com)

Other authors: Greg Ball (Novavax), Michael Colopy (UCB), Melvin Munsaka (AbbVie), and Carolyn Setze (AbbVie)

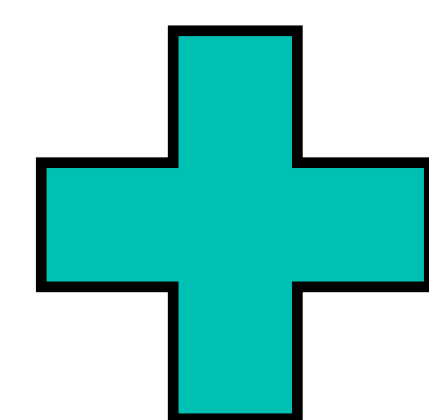

Abstract

Patient safety is an important responsibility of sponsors and regulatory authorities throughout the drug development process. To better aid the statisticians, statistical programmers, and data scientists who are engaged with these efforts, the PHUSE Safety Analytics working group has developed a subcluster within the Drug Development cluster on the PHUSE Education website to provide these quantitative scientists with a deeper understanding of the key concepts in this growing discipline.

The resources provided in this new subcluster will focus on patient safety analyses in the clinical domain. The included content is based on the working group's collective experience in trying to do better safety analyses in the interest of patients and references that have been helpful in that pursuit.

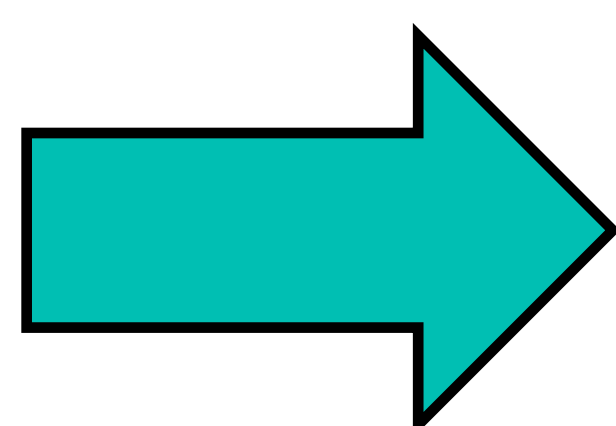

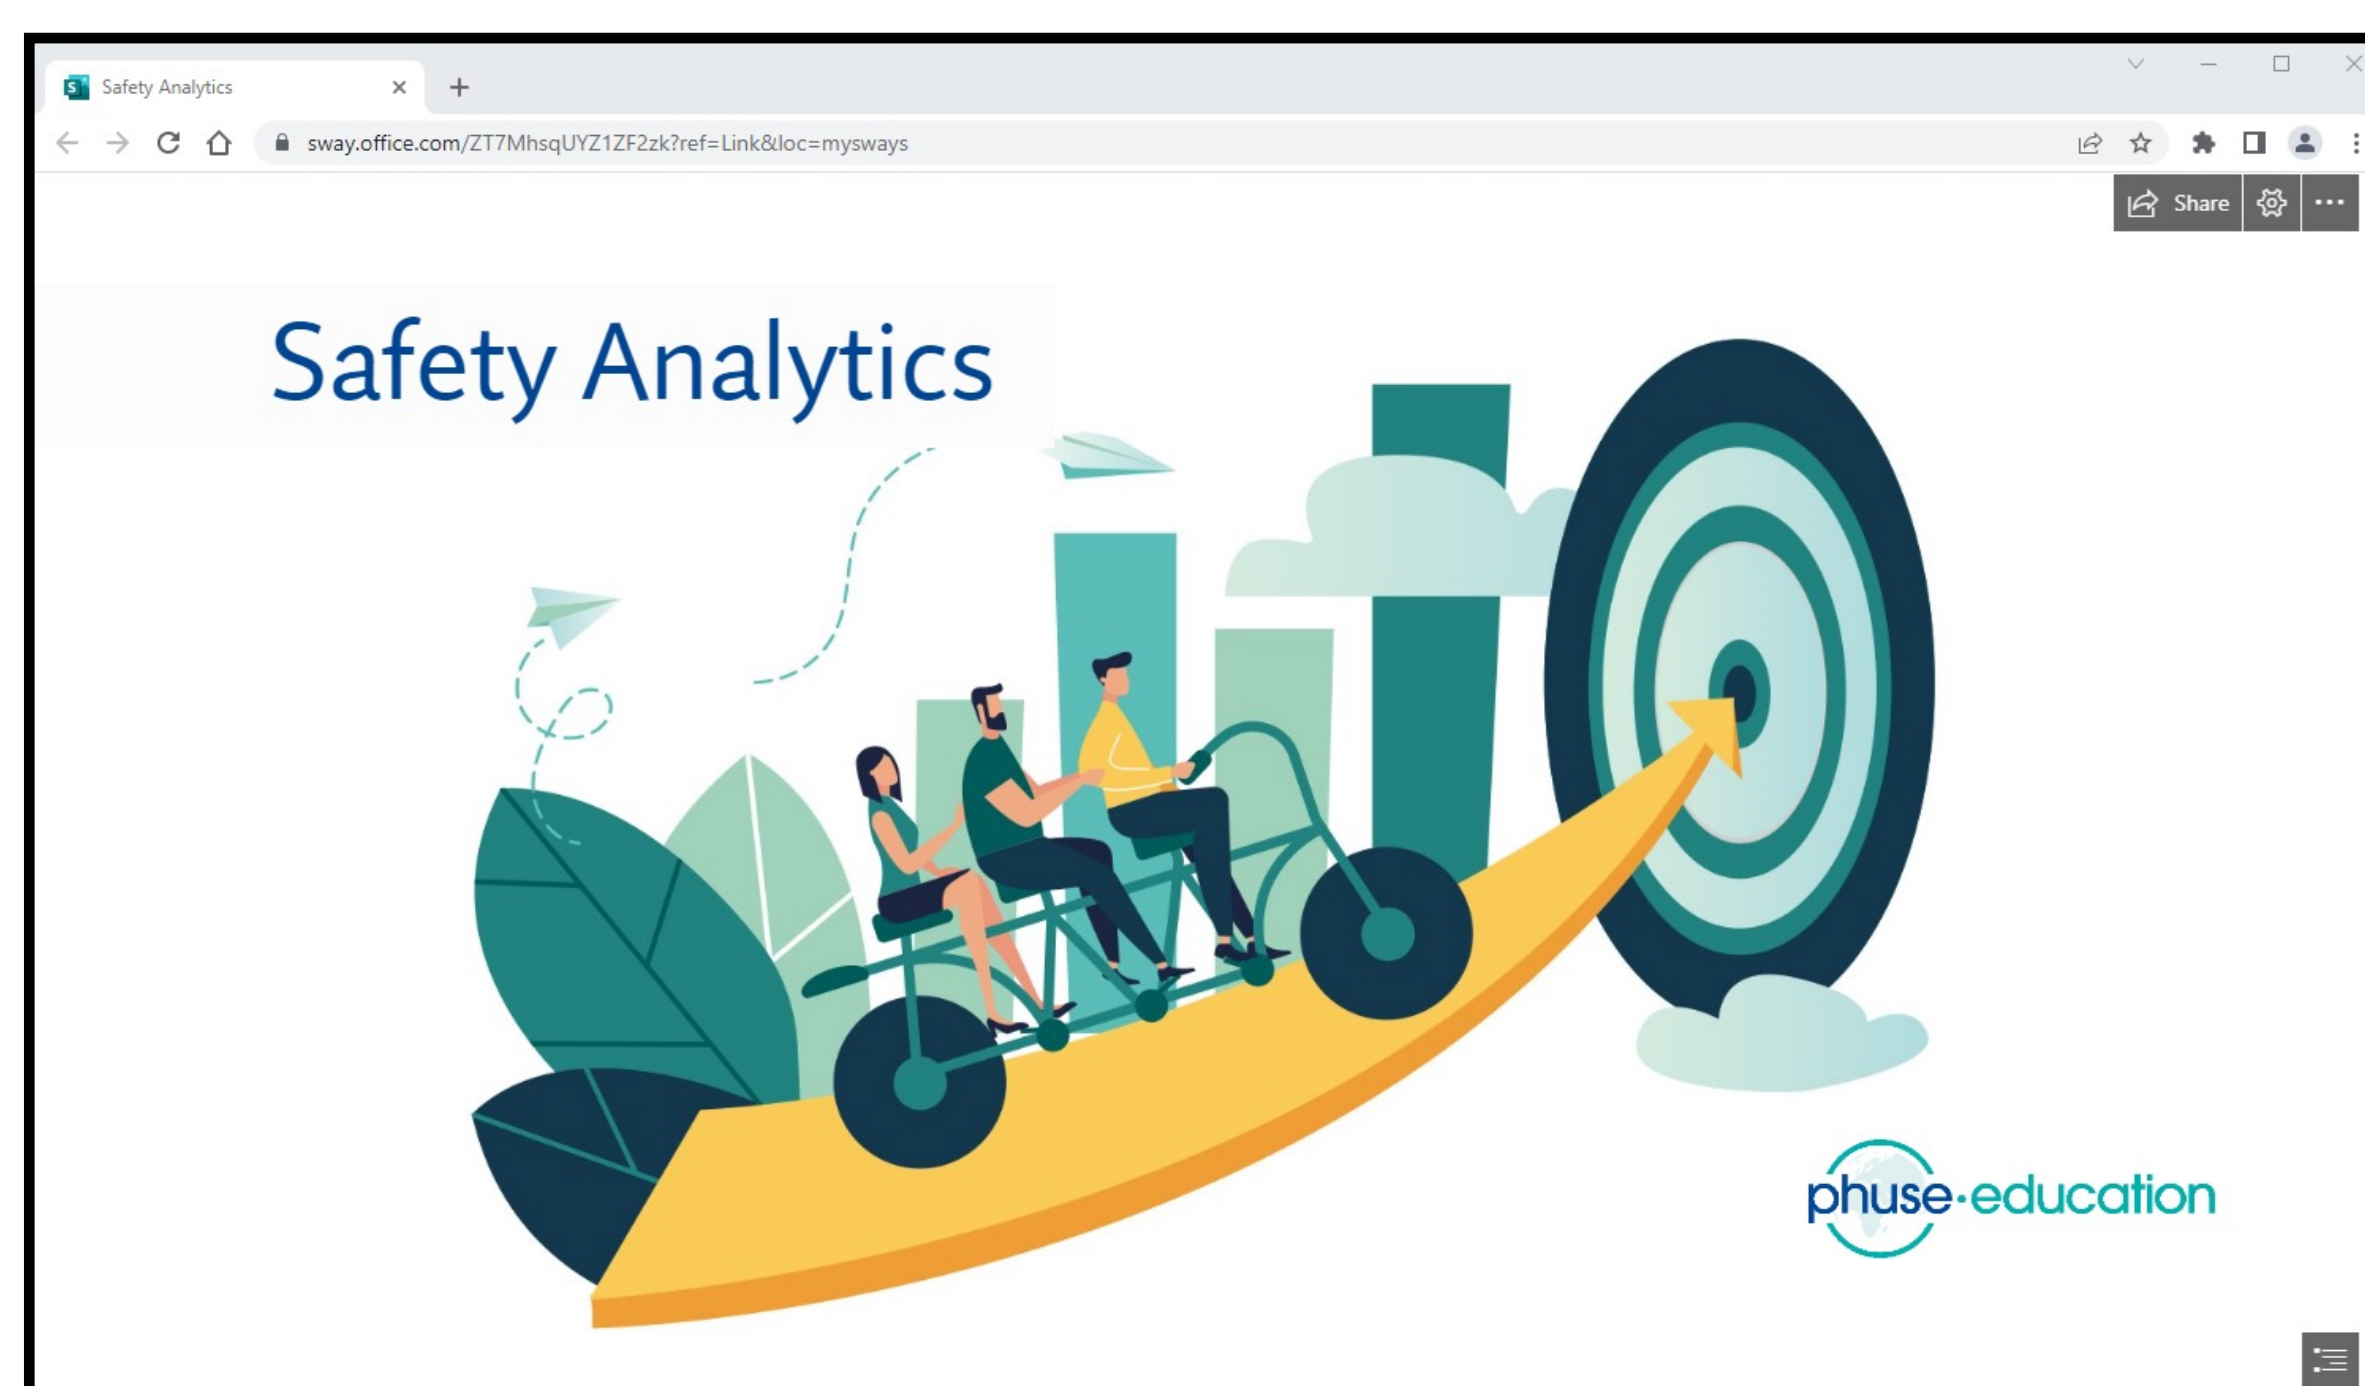

Table of Contents

- Introductory Topics
- Regulatory Guidelines
- Product Labeling
- Visual Safety Analytics
- Ongoing Aggregate Safety Evaluation
- Meta-Analysis
- Estimands
- Acronyms

Included References

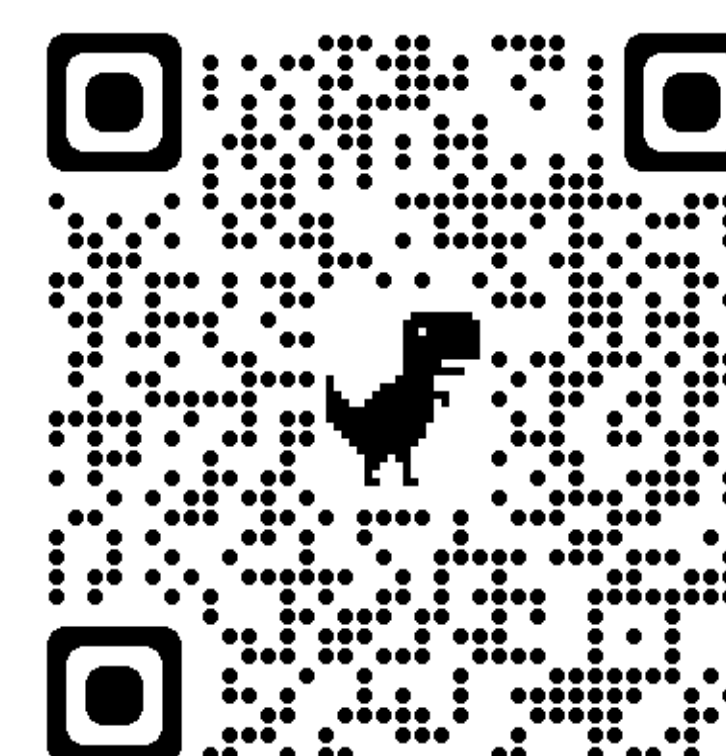

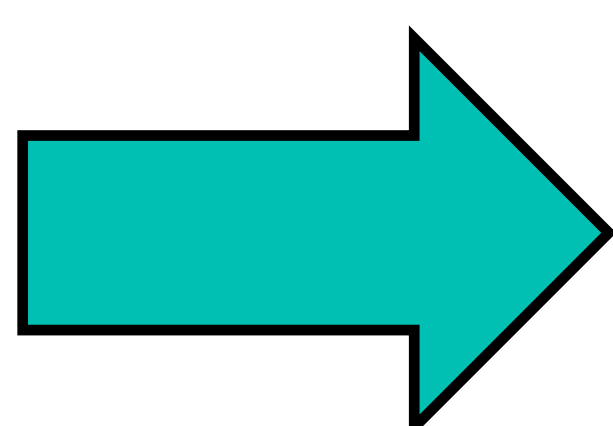

- PHUSE Educational Materials
- White Papers
- Guidelines
- Manuscripts
- Books
- Websites
