- Connecting the dots -

PHUSE has a track record of educating for the future of clinical data science. Educational topics at PHUSE events address different personnel, from industry starters and mature clinical data scientists to industry veterans. PHUSE Education was rolled out more than three years ago with the aim to connect all the dots and existing educational efforts. Our goal is to provide a roadmap to education, covering the broad bandwidth of clinical data science.

This poster will provide an overview about the set-up of PHUSE Education, progress made since the initial rollout and an insight into upcoming activities. Special focus will be on educating clinical data scientists on non-technical skills, such as regulatory environment, clinical documents and soft skills required to be successful in our industry.
