

Streamline Outputs Validation With Verify

Revolutionizing Clinical Outputs Validation: Introducing Verify, an AI-driven Solution
for Streamlining Validation Efforts and Identifying Reporting Issues

1 / TLFs Converter

- Fully digitize your static outputs and make them machine-readable.
- Perform various actions on your outputs, such as searching, comparing, and more.
- Extract your data in JSON format for further processing or integration with other systems.

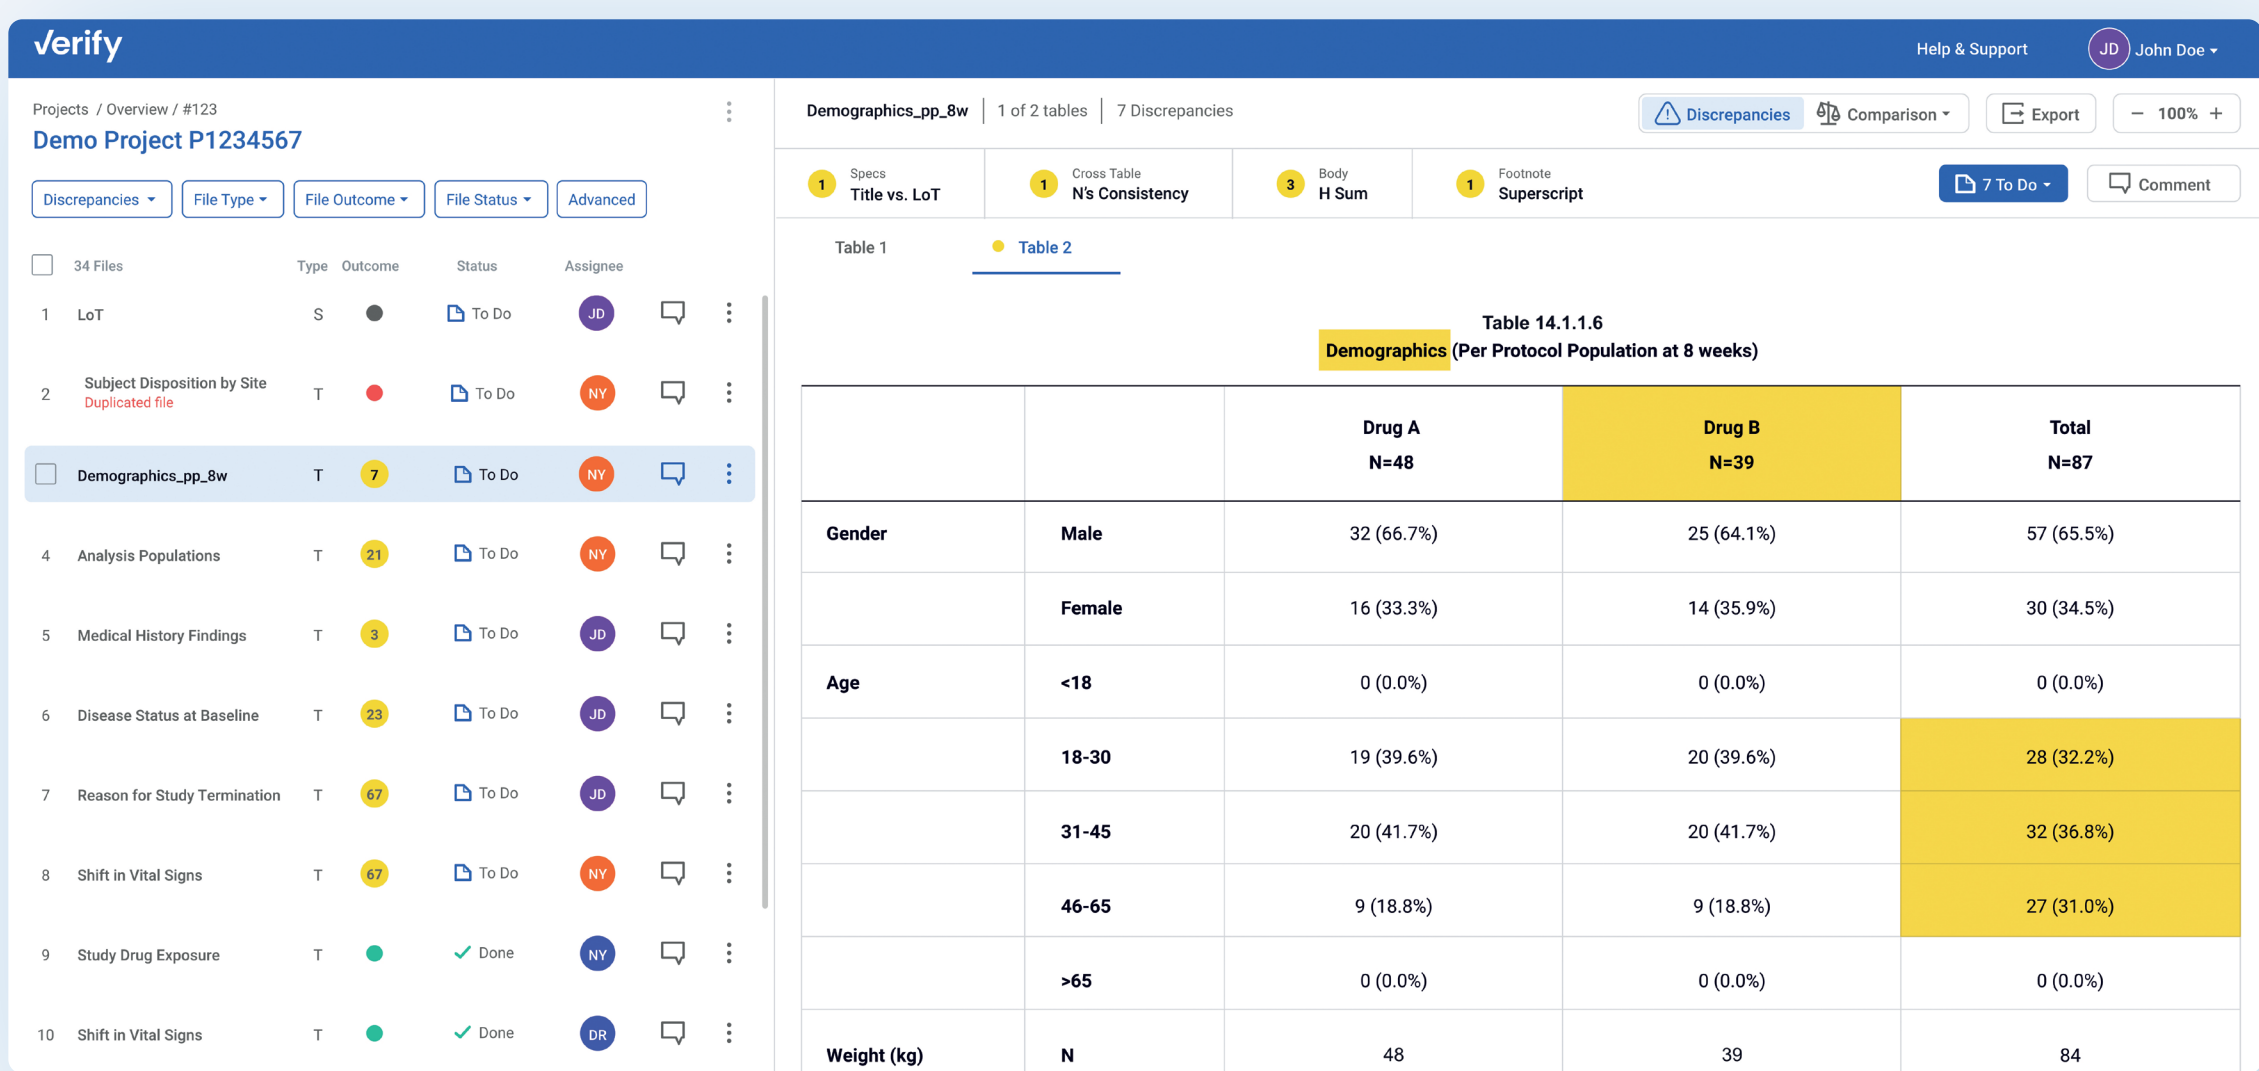

2 / Output Validator

- Ensure the accuracy of your outputs with automatic and swift analysis of discrepancies.
- Detect numerical errors or inconsistencies, including incorrect sums or calculations.
- Automated cross-table comparisons to identify inconsistencies between tables.

3 / Analysis Reviewer

- The one-stop-shop for managing the outputs validation process.
- Save time and improve efficiency by directly communicating on work in progress.
- Ensure comprehensive tracking of all project actions without loss of information.
- Track and manage discrepancy status from creation to resolution.

4 / Analysis Comparison

- Save as many versions of your project as you want.
- Compare files from different versions to ensure accuracy.
- Keep track of changes over time from a project-level perspective.
- Secure precise audit trail with seamless Excel export.
