

PP16: Best Practices in Data Standards Governance Survey: Insights and Next Steps

Project Lead: Sandra VanPelt Nguyen

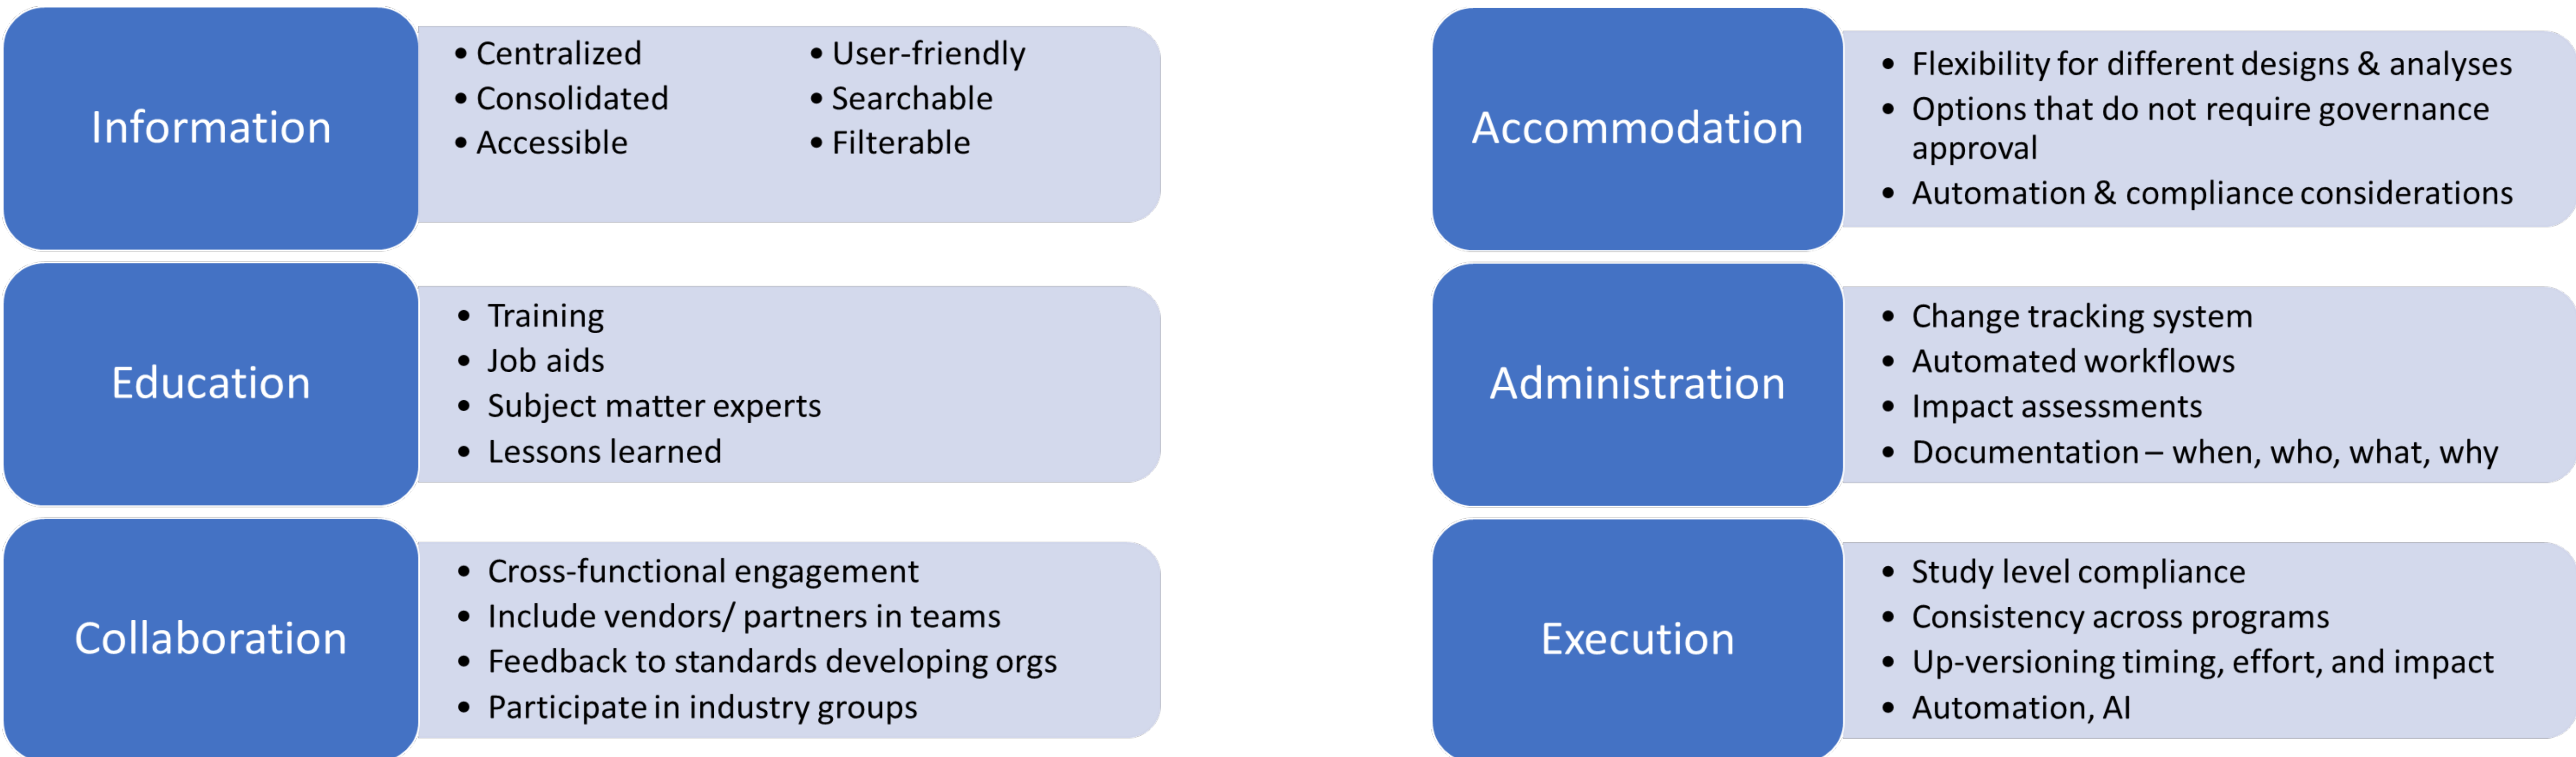

Abstract

The “Best Practices in Data Standards Implementation Governance” project, under PHUSE’s Optimizing the Use of Data Standards working group, released a survey in 2022 to gather insight into how organizations across the industry were developing and governing data standards. The survey focused on how governance was organized, the scope of standards governed, and compliance and versioning efforts, as well as the benefits and challenges experienced by organizations. There were related discussions held at PHUSE CSS events in 2022 and 2023 to dig deeper into certain challenges and pain points identified in the survey. Insights and recommendations gleaned from the feedback are highlighted here, along with areas that could benefit from further exploration in potential future projects.
