

ATORUS™ RESEARCH

Validated Analytics Platform Built for Clinical Teams

Goodbye silos. Hello synergy.

Ageirein™ is the platform that brings your environments, programs, data, apps, teams, and workflows into one place.

What you gain with Ageirein

Multiple Capabilities · One Platform

-  **One login. No juggling across tools.**
Unified Portal
Access R, Python, SAS®, and Shiny applications from a single, secure entry point.
-  **End-to-end study life cycle management.**
Full Workflow Management
End-to-end coordination from SDTM and ADaM through TFLs. Manage the whole study life cycle the way your team works.
-  **SAS® and R teams work side by side.**
Cross-Language Consistency
Cross-language teams and SAS®-to-R transitions work without fragmented results or reconciliation headaches.
-  **Everything controlled from one place — from disk to the browser.**
Single Point of Access
One place to manage across every tool, team, and study.
-  **Audit evidence is already there when reviewers ask for it.**
Audit Trails
Every execution logged, every change tracked — not reconstructed after the fact.
-  **Your team isn't rebuilding from scratch.**
Accelerators & Starter Kits
Pre-built templates, folder structures, and configurations so the groundwork is already done.
-  **Your environment is ready.**
Instant Project Environments
Validated, structured environments with folder structure, permissions, audit configuration, and data access built in from day one.
-  **Programs run in the right order, automatically.**
Ageirein Flow
Automated sequencing of interdependent programs. No manual tracking, no out-of-order errors, full execution logs.
-  **The right people have the right access.**
Permissions and Access Management
Role-based access controls built into the platform. Define view, run, edit, and approval rights by role, project, or team.
-  **Decision workflows live in the same environment.**
Application Workflow Support
Supports app-based operational workflows, including committee and review meetings like SRC, DMC.
-  **AI assistance that never touches data outside your walls.**
Compliant AI Capabilities
Powered by AWS Bedrock, operating entirely within Ageirein's infrastructure. Clinical data stays private and controlled.
-  **Infrastructure that grows with you.**
Dynamic Scaling
From a single Phase I to multiple concurrent programs across therapeutic areas.

What Ageirein takes off your plate

Ageirein improves clinical development teams' workflows with infrastructure that handles them by default — from first program and script to final submission.

BEFORE

Without Ageirein

- ✗ **Weeks of environment setup**
before work can start
- ✗ **Access chaos**
across R, SAS®, Python, and Shiny tools
- ✗ **Manual dependency tracking**
across interdependent programs
- ✗ **Multiple environments**
for SAS® and R teams
- ✗ **Fragmented version histories**
spread across individuals
- ✗ **Scrambling to reconstruct**
audit evidence after the fact

DAY ONE

With Ageirein

- + **First login within two weeks**
Pre-validated, ready-to-use platform
- + **One unified portal**
All tools, one secure entry point
- + **Flow runs the dependency graph**
Automated, sequenced, logged
- + **Multilingual by default**
SAS® and R teams work side by side
- + **End-to-end traceability**
From the disk to the browser
- + **Audit trails, always on**
Evidence is generated, not assembled

Built for the teams running the study

Different Roles · One Environment

FOR

Biostatistics Leadership

Consistent work across SAS® and R, predictable timelines, and audit evidence built in.

FOR

Study Team

Faster study starts, unified data access, and decision workflows in the same space.

FOR

IT & Infrastructure

Validated, dynamically scaling platform — replacing a stack of point tools.

FOR

Data & Safety Teams

Consistent data, outputs, and workflows that keep other teams working from the same source of truth.
