

Industry Innovators with Unmatched Technical Expertise

Data-Driven Biometrics

We treat data as an enduring asset, transforming it into actionable insights through rigorous statistical analysis and quality measures to enable precise decision-making at every stage of drug development.

Cutting-Edge Simulation and Design Software

Pioneering simulation technology, our innovative East Horizon™ platform enables adaptive, simulation-guided trial designs, informing critical decision-making.

Flexible Outsourcing Models

Our adaptable Functional Service Provider and Full-Service Outsourcing models scale with client needs, offering tailored solutions from focused statistical support to agile programming to optimize resources and control costs.

Evidence Generation and Market Access

With deep expertise in evidence strategy, we design solutions that support market access and reimbursement, enabling clients to maximize product value while addressing payer and patient needs.

Pioneers in Clinical Trial Design

Renowned for adaptive and innovative trial designs, we craft tailored strategies that drive trial efficiency, reduce time-to-market, and help companies effectively navigate complex design challenges.

Quantitative Methods and Advanced Analytics

At the forefront of quantitative analysis and advanced analytics, we handle complex data landscapes, leveraging artificial intelligence and machine learning to uncover insights that enhance evidence generation and support strategic planning.

Data Monitoring and Regulatory Compliance

Our data monitoring solutions uphold data quality, patient safety, and regulatory standards across all trial phases, providing clients with a compliant, secure framework that protects trial integrity.

Comprehensive Consulting Services

We provide strategic consulting across the drug development lifecycle, leveraging deep industry expertise to tackle complex challenges and ensure overall success in bringing new therapies to market.
